A Modern Telematics Solution

Fleet managers can use GPS tracking to cut the amount of fuel wasted while vehicles idle, enforce company speed limits, and find out which drivers are arriving for duty late. GPS tracking can make it easy to enforce policies about using company vehicles for personal errands. Managers can receive alerts if vehicles start after hours and vehicles can trigger an alert if they go out of an area designated by geofencing. Driver behavior has a significant impact on the amount of fuel each vehicle uses. Driving too fast, leaving the vehicle idling, or taking long routes all lead to higher fuel use.

Improving Driver Behavior with GPS Vehicle Locating

- Enhanced dispatching
- Rapid response time
- Increased productivity
- Measure time at locations
- Reduction of overtime
- Lower insurance premiums
- Rapid recovery of stolen vehicles
- Custom alerts and reports
- Greater asset and staff safety
- Visibility to driving patterns
- Compliance with policies
- Real-time performance reports
- Encourages safer driving habits
- Reduce fuel and maintenance costs
- Route Planning and Trip Delivery ETA
- Independent Trailer Tracking
