

A Modern Telematics Solution

fleetmovil.com

FleetMovil

GPS tracking helps fleet managers optimize fuel usage by addressing idling, speed limits, punctuality, and personal vehicle use policies. It also provides alerts for after-hours starts and geofence breaches, promoting responsible driver behavior and reducing excessive fuel consumption from factors like speeding, idling, and inefficient routes.

Event Detection

FleetMovil simplifies vehicle journey reporting by capturing data on time, distance, travel direction, starts, stops, GPS loss, low battery, and input state changes.

Tracking Analysis

Fleetmovil's tracking analysis empowers fleet managers with location monitoring, route optimization, and data-driven decision-making for improved efficiency and cost savings.

FEATURES

Enhanced dispatching

Rapid response time

Increased productivity

Measure time at locations

Reduction of overtime

Lower insurance premiums

Rapid recovery of stolen vehicles

Custom alerts and reports

Greater asset and staff safety

Visibility to driving patterns

Compliance with policies

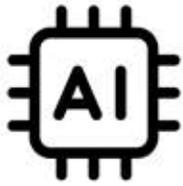

Real-time performance reports

Encourages safer driving habits

Reduce fuel and maintenance costs

Route Planning and Trip Delivery ETA

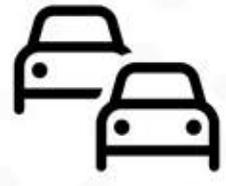

Independent Trailer Tracking

AI & Dashcams

Asset Tracking

Fleet Monitoring

Your Reliable Fleet Management Solution

Improving Driver Behavior with GPS Vehicle Locating

Fleet managers can use GPS tracking to cut the amount of fuel wasted while vehicles idle, enforce company speed limits, and find out which drivers are arriving for duty late.
